

Zepto Grocery Data Analysis using SQL Server (MSSQL)

1. Project Overview

This project analyzes the Zepto grocery products dataset using SQL Server to demonstrate data exploration, cleaning, and business insight generation.

2. Objectives

Explore the dataset, clean the data, and answer business questions using SQL.

3. Dataset

Columns: Category, Name, MRP, DiscountPercent, AvailableQuantity, DiscountedSellingPrice, WeightInGms, OutOfStock, Quantity.

4. Data Exploration

Count products, identify categories, summarize prices, inspect stock status.

5. Data Cleaning

Trim text, check NULLs, remove duplicates, validate discounts and prices.

6. Business Insights

Top expensive products, highest discounts, category revenue, inventory value, stock analysis.

7. SQL Concepts

SELECT, WHERE, GROUP BY, HAVING, CASE, Joins, CTEs, Window Functions, Aggregate Functions.

8. Conclusion

The project demonstrates core SQL Server skills suitable for a Data Analyst portfolio.
